UFP Technologies is a designer and manufacturer of a broad range of high performance cushion packaging and molded fiber products and specialty foam and plastic products. These products are custom designed and fabricated or molded to provide protection for fragile and valuable items, and are sold primarily to original equipment manufacturers in the computer, electronics, automotive, medical/pharmaceutical and industrial markets. (www.ufpt.com)

Key investment considerations:

We are reiterating our Buy rating for shares of UFP Technologies (UFPT) and setting a twelve-month price target of \$8.00. Our price target has been lowered since our last report (\$8.50) primarily due to a lower multiple applied to our fiscal 2006 estimates.

For the second quarter ended June 30, 2005 versus the same period in 2004: net sales increased 24% to \$20.9 million from \$16.8 million. Net income was \$0.3 million or \$0.06 per diluted share versus net income of \$0.2 million or \$0.04 per diluted share.

We were pleased to hear that the new automotive program was doing well; however, we are scaling back on our estimates for the remaining automotive business in light of the current state of auto sales in this country. American auto manufacturers have been losing market share for several years and projections call for market share losses to continue.

Despite a portion of UFPT's automotive programs feeling the impact of challenging market conditions, the Company's long-term outlook continues to be strong because the previously announced \$77 million automotive contract has recently been estimated to be worth \$95 million due to design enhancements and strong growth continues in the military and medical markets.

Business

The Company operates in two segments: Packaging Products and Component Products.

UFP Technologies' packaging products are used to contain, display and/or protect manufactured goods during shipment, handling, storage, marketing and use. The interior cushion packaging market is characterized by three primary sectors: (1) custom fabricated or molded products for low volume, high fragility products; (2) molded or die-cut products for high volume, industrial and consumer goods; and (3) loose fill and commodity packaging materials for products which do not require custom-designed packaging. Examples of the Company's packaging products include end-cap packs for computers, corner blocks for telecommunications consoles, anti-static foam packs for printed circuit boards, die-cut inserts for attaché cases and plastic trays for medical devices and components.

The Company's component products segment features specialty foam and plastic products that are sold primarily to customers in the automotive, sporting goods, medical, beauty, leisure and footwear industries. These products include components for automobiles and medical diagnostic equipment, abrasive nail files and anti-fatigue mats, and shock absorbing inserts used in athletic and leisure footwear.

Industry

According to packaging-technology.com, the packaging industry is worth an estimated \$600 billion and continues to experience above average growth of between 10 and 15 percent, with some sectors achieving growth rates of 20 percent. Currently, the packaging industry has been thrust into the spotlight with increasing consumer demand for packaged goods making the industry one of the strongest in the economy. New stringent legislation, increasing competition and dynamic new markets are forcing packaging executives to develop and manufacture innovative packaging more quickly, effectively and profitably than before.

Recent Financial Results

For the second quarter ended June 30, 2005, versus the same period in 2004:

- Net sales increased 24% to \$20.9 million from \$16.8 million.
- Gross margins decreased to 19.7% from 21.8%.
- SG&A expenses increased to \$3.4 million from \$3.1 million.
- Net income was \$0.3 million or \$0.06 per diluted share versus net income of \$0.2 million or \$0.04 per diluted share.

In comparison, Taglich Brothers' estimates called for second quarter net sales of \$19.3 million and net income of \$0.5 million or \$0.09 per diluted share.

The Company attributed the increase in net sales primarily to growth in its medical and military business.

Balance Sheet as of June 30, 2005

Cash and cash equivalents was approximately \$0.3 million. The Company had working capital of \$1.7 million, a tangible book value of \$1.66 per share and a long-term debt-to-equity ratio of 0.4X. Cash provided by operations during the six months ended June 30, 2005 was approximately \$1.3 million. UFPT had an available balance under its line of credit of approximately \$3.7 million. We believe that UFPT's current line of credit and future expected cash flows from operations will be sufficient to fund operations for the next twelve months.

Discussion and Outlook

Some interesting statements from the earnings release:

- Currently working to double clean room capacity to meet rising medical market demand;
- Due to high petroleum prices, UFPT has seen a solid increase in its pipeline for molded fiber products;
- The new automotive program in Atlanta is proceeding smoothly; and
- The balance of the automotive business in Michigan is facing very challenging market conditions.

We were pleased to hear that the new automotive program was doing well; however, we are scaling back on our estimates for the remaining automotive business in light of the current state of auto sales in this country. American auto manufacturers have been losing market share for several years and projections call for market share losses to continue.

Despite a portion of UFPT's automotive programs feeling the impact of challenging market conditions, the Company's long-term outlook continues to be strong as the previously announced \$77 million automotive contract has recently been estimated to be worth \$95 million due to design enhancements. Also, strong growth continues in the military and medical markets. The eight-year automotive contract calls for UFPT to provide molded door panels to a large tier-1 automotive supplier. Manufacturing began in the fourth quarter of 2004 and full rate production is estimated for 2006.

UFP Technologies experienced significant phase-in costs in the first half of 2005 and the Company expects further costs to be incurred throughout 2005. However, increasing sales volumes from the new automotive program are expected over the next couple of years. The Company has met every milestone in this program to date, and will now focus on fulfilling increasing production demand.

Besides the boost to UFPT's components products that should come from the large automotive contract, we believe that sales of UFP Technologies' packaging products should also do well when one takes into consideration forecasts for the markets that the Company sells to. A significant portion of the Company's packaging products sales are to manufacturers of computer peripherals and other consumer products. According to a report by Research and Markets (IT Spending and Trends, March 2005), many analysts are predicting that the worldwide technology market will show moderate spending growth in 2005. After showing steady improvement during 2004, aggregated estimates suggest spending will grow between 4% and 8% this year. eMarketer projects that IT spending will come in at the higher end of the range, between 6% and 8%.

Projections

We believe the above information suggests that UFP Technology's sales should continue to grow in 2005 and beyond. For fiscal 2005, we estimate UFPT's sales will increase by 20% to \$82.1 million and the Company will report net income of \$1.2 million or \$0.22 per diluted share. Previous estimates for fiscal 2005 called for sales of \$78.9 million and net income of \$2.1 million or \$0.39 per diluted share. For fiscal 2006, we estimate UFPT's sales will increase by 13% to \$92.7 million and the Company will report net income of \$3.9 million or \$0.75 per diluted share. Previous estimates for fiscal 2006 called for sales of \$90.0 million and net income of \$4.0 million or \$0.75 per diluted share. We have increased our revenue estimates and decreased our earnings estimates primarily due to the better than expected revenue results and continued pressure on margins. We are assuming that the \$95 million contract discussed earlier will be operating at approximately 50% of full rate production in 2005 and 100% thereafter.

Risks

Cash concerns

Although we believe that the Company will have adequate resources to fund operations for the next twelve months, future cash flows may be less than we anticipate due to depressed market conditions. If market conditions remain at weak levels, we believe UFP Technologies will need to secure additional financing in order to maintain its current level of operations. As there can be no assurance of the Company's success in obtaining additional capital, shares of UFPT should only be purchased by those who are comfortable taking on above average risk.

Competition

The packaging and specialty foam products industry is highly competitive. The Company's foam and fiber packaging products compete against other alternative products made from materials such as expanded polystyrene foams, die-cut corrugated, plastic peanuts, plastic bubbles and foam-in-place urethane. UFP Technologies also faces competition in the specialty foam products area from smaller companies that typically concentrate on production for specific industries.

IT spending forecasts

Although recent forecasts support an increase in IT spending for 2005, there can be no assurance that this will actually happen. Should IT spending remain at depressed levels, the operating results of UFP Technologies are likely to be adversely affected.

Federal Reserve

Over the past fourteen months, the Federal Reserve has raised short-term interest rates 10 times. Investors need to be aware that such a monetary policy is theoretically bad news for equity prices and valuations.

Liquidity

With only 4.8 million shares outstanding and 2.5 million in the float, liquidity issues must be considered. Average daily volume is approximately 15,000 shares. Any significant trading in shares of UFPT could result in large swings in the price of the stock.

Miscellaneous risks

The Company's financial results and equity values are subject to other risks and uncertainties known and unknown, including but not limited to competition, operations, financial markets, regulatory risk, and/or other events. These risks may cause actual results to differ from expected results.

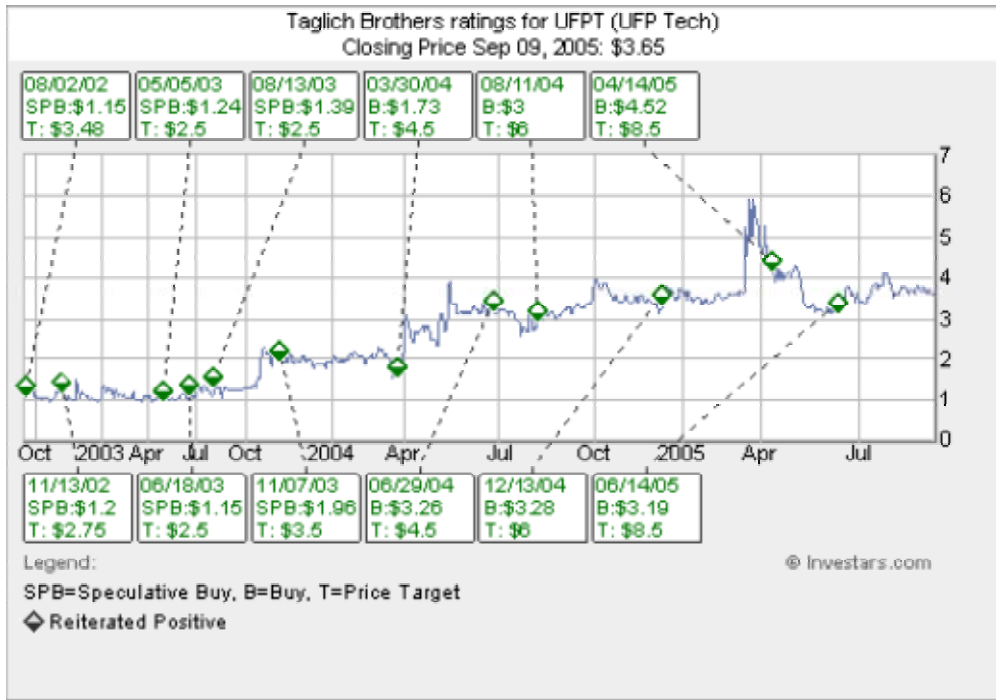

Conclusion and Valuation

We are reiterating our **Buy** rating for shares of UFP Technologies (UFPT).

Some key investment considerations include:

- UFP Technologies experienced significant phase-in costs in the first half of 2005 and the Company expects further costs to be incurred throughout 2005. However, increasing sales volumes from the new automotive program are expected over the next couple of years.
- We were pleased to hear that the new automotive program was doing well; however, we are scaling back on our estimates for the remaining automotive business in light of the current state of auto sales in this country. American auto manufacturers have been losing market share for several years and projections call for market share losses to continue.
- Despite a portion of UFPT's automotive programs feeling the impact of challenging market conditions, the Company's long-term outlook continues to be strong because the previously announced \$77 million automotive contract has recently been estimated to be worth \$95 million due to design enhancements and strong growth continues in the military and medical markets.
- For fiscal 2005, we estimate UFPT's sales will increase by 20% to \$82.1 million and the Company will report net income of \$1.2 million or \$0.22 per diluted share. For fiscal 2006, we estimate UFPT's sales will increase by 13% to \$92.7 million and the Company will report net income of \$3.9 million or \$0.75 per diluted share.

UFPT continues to trade at a large discount to the industry (containers and packaging) averages. The TTM price to sales multiple for shares of UFPT is currently 0.3X vs. 0.6X for the industry. UFPT's price to book multiple is currently 1.2X vs. 2.7X for the industry. We believe that a continual improvement of the Company's operating results should help to firm UFPT's multiples in regard to the industry. The industry is currently trading at approximately 22X TTM earnings. As a conservative valuation, we are applying a price to earnings multiple of approximately 11X for shares of UFPT to take into account the risks associated with investing in microcap stocks. Applying a multiple of 11X to our forecasted earnings of \$0.75 per share in fiscal 2006 (\$0.72 discounted to a twelve-month value) gives us a **twelve-month price target of approximately \$8.00 per share.**

Taglich Brothers' Current Ratings Distribution

Meaning of Ratings

Buy

We believe the Company is undervalued relative to its market and peers. We believe its risk reward ratio strongly advocates purchase of the stock relative to other stocks in the marketplace. Remember, with all equities there is always downside risk.

Speculative Buy

We believe that the long run prospects of the Company are positive. We believe its risk reward ratio advocates purchase of the stock. We feel the investment risk is higher than our typical “buy” recommendation. In the short run, the stock may be subject to high volatility and continue to trade at a discount to its market.

Neutral

We will remain neutral pending certain developments.

Underperform

We believe that the Company may be fairly valued based on its current status. Upside potential is limited relative to investment risk.

Sell

We believe that the Company is significantly overvalued based on its current status. The future of the Company's operations may be questionable and there is an extreme level of investment risk relative to reward.

Some notable Risks within the Microcap Market

Stocks in the Microcap segment of the market have many risks that are not as prevalent in Large-cap, Blue Chips or even Small-cap stocks. Often it is these risks that cause Microcap stocks to trade at discounts to their peers. The most common of these risks is liquidity risk, which is typically caused by small trading floats and very low trading volume which can lead to large spreads and high volatility in stock price. In addition, Microcaps tend to have significant company specific risks that contribute to lower valuations. Investors need to be aware of the higher probability of financial default and higher degree of financial distress inherent in the microcap segment of the market.

From time to time our analysts may choose to withhold or suspend a rating on a company. We continue to publish informational reports on such companies; however, they have no ratings or price targets. In general, we will not rate any company that has too much business or financial uncertainty for our analysts to form an investment conclusion, or that is currently in the process of being acquired.
